

Standard for over 50 Years

P-Series Piston Vibrators

Energy Efficient - Low air consumption compared to rotary type vibrators.

Durable - Tough ductile iron housing with chrome plated piston. Chrome plating protects piston from dirt and debris which can scratch and score the piston making it inoperable. Plating also prevents rust that may occur during long periods of non-use.

Long Life Railcar Models - Piston and housing bore are coated with Teflon® for protection from debris and to decrease the chance of failure due to inadequate lubrication.

Trouble-Free Operation - No maintenance required if filtered, lubricated air is used.

PERFORMANCE DATA FOR P-SERIES PISTON VIBRATORS

VIBRATOR MODEL	START UP	AIR PRESSURE								
		20 PSI (1.4 BAR)			40 PSI (2.8 BAR)			60 PSI (4.1 BAR)

All force data exceeding 4800 LBS is estimated.

* Available as Timed Impact Models (TMD) .

Springs available upon request. Use a spring if vibrator is mounted horizontally or the position of the vibrator is at an angle of less than 15° off the horizon. Occasionally the piston will stop in a middle of a cycle, which will block ports, making it difficult to restart. Springs push the piston back to the starting position.

P-Series Piston Vibrators are available in either:

Impact Models (IM) - The piston strikes the base of the vibrator producing the greatest amount of force.

Air-Cushioned Models (AC) - Quieter than impact models because a cushion of air eliminates metal-to-metal impact.

Timed Impact Models (TMD) - Delivers one impact at a time on a predetermined signal. Controlled by an electric, electronic, or pneumatic timer, or a programmable controller.

Railcar Models (PRR) - Comes with a wedge mount bracket to fit railcar pockets. Pistons and bores are Teflon® coated for protection against contaminants and inadequate lubrication.

Matchplate Models (MP) - Impact type with universal base mount used on foundry matchplates. Comes with an internal spring which allows any mount orientation.

Operating Requirements

20-60 PSI (1.4-4.1 BAR) depending on model
1.5-30 CFM (43-850 LPM)

Requires filtered, lubricated air.

P-Series

Pneumatic piston vibrators with durable iron unibody construction and chrome or Teflon® coated pistons.

Simple to use - Simple to install

P-Series
