

K BALL ALUMINUM VIBRATOR

The K BALL Vibrator is a very simple and inexpensive flow aid device used in a variety of small bin and hopper applications.

Here are a few additional functions where this items has been very useful:

- Assisting the flow of material from chutes and hoppers
- Preventing bottles and similar objects from locking together and blocking conveyor systems
- Compaction of material in containers and molds.
- Separation of various sizes of material on small screens

CONSTRUCTION

Manufactured with a rustproof extruded aluminum body fitted with hardened steel races on which a steel ball rotates.

Nylon endplates are located on either side to contain the ball and prevent the entry of dust and water, thus allowing the unit to be used in dusty or wet environments.

Inlet and exhaust ports have BSP pipe threads, allowing the exhaust air to be piped away, ensuring no restriction on the air outflow.

Four mounting holes are provided, two vertical and two horizontal, for handling difficult mounting positions.

Both force output and frequency can be regulated by adjusting the air flow to the vibrator.

Vibrators come complete with inlet fitting and muffler.

Air pressure	from 30 to 90 PSI Max
Pressure regulator	Recommended
Air type	Clean - Use filter of 40 micron or lower
Lubrication	Light use: Not necessary Heavy use: Recommended
Housing	Extruded Aluminum
Coating	Stove enameled cream-grey
End caps	Black nylon polyamide
Max temperature	220° F (100° C)
Noise Level Range	70 to 95 dBA

ANODIZED MODELS

Some K ball vibrators models are now available in black anodized aluminum.

Anodized vibrators are recommended when used in food environments where paint coated items are not allowed. Anodized aluminum has better natural protection against corrosion and wear, due to its rougher surface and the thick oxide layer that surrounds it. Likewise, anodizing prevents aluminum from cracking or peeling from regular use. It is currently available on size 8 and 10 only.

LOW CLEARANCE K 8 NF

The K8 NF is a ball vibrator with no base mount. With its smaller dimensions (1.97" x 1.97" x 0.79") it can be fit more easily into tiny spaces. It is mounted with the two horizontal bolt holes located in the main housing. Outer surface is polished aluminum with no paint.

1. Extruded aluminum Housing
2. Hardened carbon steel races
3. Black nylon polyamide endplates
4. Chrome steel ball
5. BSP Air inlet
6. BSP Air exhaust
7. Base vertical mounting holes
8. Horizontal mounting holes
